

Product Presentation

Application

This machine is used to test the flammability of pile fabrics and simulated fur fabrics (except floor coverings).
 Principle: The sheet of fabric is held vertically in a substantially draught-free enclosure and a flame is moved across the surface of the pile at a known speed to determine whether flame from the igniting source flashed over the surface of the pile.

Standards

BS4569

Specification

Model	GT-M20
Burner inner diameter	3mm
Burner moving speed	150mm/s
Burner moving distance	≥300mm
Sample size	200x130mm
Height of testing flame	50mm
Ignition distance	5mm
Power	AV 220V 50/60Hz
Dimensions	600x400x370mm
Weight	20kg

Accessories

Standards accessories	1pc	Power line
Optional accessories	Optional	Gas supply device
